

LAVIDERM

DERMOCOSMÉTICA

Lavi Age Peeling High

pH (1,0 – 1,2)

LAVI AGE PEELING HIGH is an anti-ageing, depigmenting chemical peel that also provides brightness. It has a 70% concentration of glycolic and tranexamic acids. With a freshness effect (MENTHOL) that makes the treatment more comfortable.

INDICATIONS

LAVI AGE PEELING HIGH with intense (high) action, is designed to treat those demanding skins that show a high tolerance to raised concentrations of glycolic acid.

- It corrects dyschromia (skin blemishes).
- It reduces wrinkles and expression lines.
- It brightens (an extra supply of natural light to the skin).
- It homogenises the skin texture and tone.
- It helps the skin imperfections resulting from scars (acne...) and stretch marks reduce.

COMPOSITION

ACTIVE INGREDIENTS	ACTION
Glycolic acid	Exfoliant
Tranexamic acid	Exfoliant, depigmenting
Menthol	Refreshing, it provides comfort during the treatment

INGREDIENTS

Glycolic acid, aqua, tranexamic acid, propylene glycol, menthol.

HOW TO USE

- 1 Cleanse the area to be treated carefully before the application of the product, and remove make-up, if necessary.
- 2 Protect the eyes with some cotton pads moistened in water and the lips, wings of the nose and tattoos or micropigmentation with a moisturising cream.
- 3 Extract 2.5 ml of product with a 19 G needle, remove the needle and apply the product with nitrile gloves or a fan brush.
- 4 Leave on around 2-5 min, and increase that time in subsequent sessions, according to professional criterion based on the type of skin and tolerance of the patient. The product causes a burning sensation and redness on the skin.
- 5 Rinse with cool water, never hot, with soaked gauzes, cotton pads or cloths. Rinsing the product with water may cause a reactivation of the peeling, bringing a sensation of heat and burning, which calms down as the product is removed.
- 6 Apply a neutralising solution and leave on for 5 minutes. Remove, equally, with cold water.
- 7 Finish with moisturisation and nutrition as well as very high photo protection.

Check with the professional protocols.

Apply **once every 1 or 2 weeks** for a total of **4-6 sessions**, according to professional criterion and the intended objective. The **days following** the treatment:

-Ensure a **good skin moisturisation and nutrition** in home care and maintenance. **Drink between 1.5 – 2 L of water a day.**

-**Avoid** direct sun exposure, as well as solarium sessions, during the following days.

-Protect the skin against sun rays (10 - 15 days). Before going out, apply **very high photo protection.**

CONTRAINDICATIONS

- Do not apply to the eyes, lips, or mucous membranes.
- Do not use in pregnant women or breastfeeding mothers.
- Do not use in people with autoimmune pathologies, skin diseases, herpes, severe active inflammatory injuries, etc.
- Do not apply in case of confirmed or under suspicion hypersensitivity to any of the components of the product (see the list of ingredients). Carry out a sensitivity test.
- Avoid irritating actions and products.
- Avoid high body and environmental temperature, reduce - freshen.

PRECAUTIONS

- If the area happens to show a more intense activity during the time of exposure of the chemical peel, proceed to neutralise the area with neutralising solution or water, leaving the rest of the applied area on.
- In case of unbearable irritation, wash with plenty of cold water for 10-15 minutes. If irritation continues, medical measures will be required.
- Store in a cool place, protected from light and away from heat sources.

PRESENTATION

5 vials of 10 ml.
